The MINIRAM (Miniature Real-Time Aerosol Monitor) Model PDM-3 is an ultra-compact personal size airborne particulate monitor. The MINIRAM can be used to measure the concentration of all forms of aerosol: dusts, fumes, smokes, fogs, etc. Its small size and weight, and concentration-averaging features permits its use as a personal exposure monitor.

Alternatively it can be used as an area monitor for both indoor and ambient air situations. Test chamber monitoring, visibility measurements, cloud detection, aerosol dispersion studies, etc. are additional applications of the MINIRAM.
